Get the Facts About HPV

Human papillomavirus or HPV is a virus you may not know too much about—but you should. HPV will affect an estimated 75% to 80% of males and females in their lifetime. For most, HPV clears on its own. But, for others who don’t clear certain types, HPV could cause significant consequences: cervical, vaginal, and vulvar cancers in females. Other types could cause genital warts in both males and females. And there’s no way to predict who will or won’t clear the virus.

Who should get vaccinated with Gardasil? GARDASIL is for females and males ages 9 to 26. When it comes to human papillomavirus (HPV) vaccination, females are only half the equation. Males can get vaccinated, too. Like other vaccines, GARDASIL works to help prevent illness. GARDASIL works when given before there is any contact with the relevant HPV types. Girls and boys as young as 9 can get vaccinated.

If you’re a young adult who is already sexually active, you may still benefit from GARDASIL. That’s because even if you have been exposed to HPV, you may not have been exposed to the types of the virus covered by this HPV vaccine. GARDASIL could still help protect you against the relevant HPV types to which you haven’t been exposed.

If you are considering GARDASIL check out the following web site for more information www.gardasil.com
